

Project Team 10 - Meeting minutes

Date: Tuesday, 24th February 2026

Time: 3:00 PM

Location: Virtual (Microsoft Teams)

Meeting Type: Bi-Weekly Project Meeting

Present: Yeaw Chu Lee, Tianyang Zhao, Ethan Adegbeyeni, David Bello, Jenson McEwan, Oscar Oliver

Meeting Purpose

Present the client with the project's current progress as well as discuss how we will be gathering the extra data that they will provide.

Discussion Summary

1. Presentation and demonstration of the current visualisation app on unity.
The Team demonstrated how the wind turbine visualisation looks as well as going through how it works step by step.
Answered many questions in relation to the processes of calculation and interpolation.
2. Data viability Evaluation
The Team discussed the data being represented in the visualisation by the client.
Determined that 50 points would be sufficient for the visualisation in this project.
Went through and chose the most suitable 50 points of data to be represented/visualised in order to ensure accuracy.
3. Outstanding Items
Awaiting the 50 data points in both the large file form (500GB+) and the more accessible compressed only important data form.
4. New Items
Focus on combining the methods of visualisation of individual aspects (such as wind, water, streaklines, turbine speed, etc...)
Investigate more plugin options that would be the most optimal performance wise for both calculation and visualisation.

Next Meeting

Date: Tuesday, 10th March 2026

Location: Virtual (Microsoft Teams)
